

TRIBHUVAN MATCHA

☎ 8555083261 _tribhuvanmatcha@gmail.com [Github](#) [Linkedin](#) [Portfolio](#)

PROFILE

I am proficient in Python, SQL and with foundational knowledge in java ,experience in PowerBi and Machine learning algorithms.I am equipped with deterministic mindset and concentration, Being a good learner and a person with an eye for detail, I am capable of adapting to the technology in a fast-paced environment.

SKILLS

Languages : **Python,Java,SQL,Visualbasic**
Web technologies : **HTML,CSS, JavaScript**
Web technology frameworks : **React,Node**
Databases : **MySQL server,Oracle**

Python frameworks : **Pandas,Numpy,Matplotlib**
Tensorflow,Plotly,Bokeh
Tools&development : **Excel,PowerBi,Tableau**
Operating Systems: Windows,Linux
Version Control: **Git**

EXPERIENCE

PROJECTS

Covid-19 Exploratory Data Analysis

- Optimized and managed large COVID-19 dataset in **relational databases**, ensuring rapid data retrieval and system performance to drive impactful decision-making.
- Utilized advanced **SQL queries** to **clean** and **preprocess** raw COVID-19 data, ensuring high accuracy and reliability to drive meaningful **analysis** and actionable **insights**.
- Performed in-depth **exploratory data analysis** (EDA) on COVID-19 datasets using **SQL**, uncovering critical trends in cases, mortality rates, and vaccination progress to inform **data-driven strategies**.

Price Optimization and Analysis

- Developed and implemented **dynamic pricing models** by Applied Agile development practices, including daily stand-ups and sprint planning, while utilizing Scrum methodology for the Price Optimization and Analysis project, ensuring timely delivery of features.
- Harnessed **Python's data analysis** libraries like **Pandas** and **NumPy** to streamline **data manipulation** and develop models, driving efficient **insights generation**.
- Trained a **Decision Tree Regressor** model to analyze competitor pricing and market trends, delivering data-driven insights to optimize **pricing strategies**.
- Created impactful **charts** and **graphs** using **Matplotlib** and **Seaborn**, effectively **visualizing** pricing and sales trends to support data-driven **decision-making**.

personalized investment plan

- Designed a personalized **Systematic Investment Plan** (SIP) by **analyzing** stock market data, enabling tailored **investment strategies** for optimized financial growth.
- Used Python for **data analysis** and **model development**, leveraging **Pandas** and **NumPy** to enable **efficient data manipulation** ensuring **Data Governance,Data security** and **precise financial computations**.
- Crafted tailored **investment portfolios** by applying **financial planning principles**, balancing risk and return to align with clients' **risk tolerance** and investment goals.
- Generated detailed **visualization reports** with Python tools to analyze investment performance metrics,these efforts enhanced the clarity of financial presentations for clients during review meetings.

Sales Dashboard-Adventure Works

- Built interactive **dashboards** using **PowerBI** to deliver actionable **insights**, enhancing data-driven **decision-making** and **business performance**.
- Created a **dynamic visualizations** (**pie charts, maps, tables**) to track **KPIs** and analyze revenue, enabling informed **business decisions**.
- set up **ETL(Extract,Transform,Load)** **pipelines** to load data from **MySQL** sever to **Azure Data Factory** in cloud
- Implemented **user-driven filters** by using **Azure Synapse Analytics** to enhance **reporting** capabilities and facilitate deeper **data exploration**.

USE CASES

3D Plotting Model

- Constructed and put into practice of advanced 3D plotting techniques using Python libraries such as **Matplotlib, Plotly**, and may include custom **plotting algorithms** for visualizing **complex data sets**, including **surface plots, scatter plots**, and **animations**.
- Improved **data visualization** efficiency by optimizing rendering performance and adding **interactivity features** (e.g., **zoom, rotation, dynamic data updates**), enhancing the overall **user experience**.

Signal Processing Model

- Formulated algorithms for **analyzing** and **processing** time-series data, including **filtering, modulation, spectral analysis**, and **wavelet transformations**, using tools such as **MATLAB** and **Python**.
- Applied techniques for noise **reduction, signal restoration**, and **feature extraction** to enhance the **quality** and interpretability of **complex** signals in applications such as telecommunications and **audio processing**.

DETAILS

EDUCATION

Majors:Artificial Intelligence & Data Science
Vasireddy Venkatdri Institute of Technology

COURSES AND CERTIFICATIONS

- **Azure Cloud Foudations**
Microsoft
- **Data Analyst Associate**
Microsoft
- **Generative AI**
google
- **Advance Data(Business) Analytics**
Andhra Pradesh Skill Development

ACCOMPLISHMENTS

- **Recognized with a good participation in a workshop on Design Thinking conducted by Stanford University**
 - **Hosted a communication workshop to 200 students in my college**
 - **Awarded with 5-star Golden badge in problem solving using python**
 - **Awarded with 3-star Silver badge in Data Structures and Algorithms in python programming**
 - **Mentored SQL Technology to 100 students in college**
-
